## Statistics in Engineering: With Examples in MATLAB (R) and R, Second Edition (Hardback)

By Andrew Metcalfe, David Green, Tony Greenfield,

Taylor & Francis Ltd, United Kingdom, 2019. Hardback. Condition: New. 2nd New edition.

Language: English. Brand new Book. Engineers are expected to design structures and machines that can operate in challenging and volatile environments, while allowing for variation in materials and noise in measurements and signals. Statistics in Engineering, Second Edition: With Examples in MATLAB and R covers the fundamentals of probability and statistics and explains how to use these basic techniques to estimate and model random variation in the context of engineering analysis and design in all types of environments. The first eight chapters cover probability and probability distributions, graphical displays of data and descriptive statistics, combinations of random variables and propagation of error, statistical inference, bivariate distributions and correlation, linear regression on a single predictor variable, and the measurement error model. This leads to chapters including multiple regression; comparisons of several means and split-plot designs together with analysis of variance; probability models; and sampling strategies. Distinctive features include: All examples based on work in industry, consulting to industry, and research for industry. Examples and case studies include all engineering disciplines. Emphasis on probabilistic modeling including decision trees, Markov chains and processes, and structure functions. Intuitive explanations are followed by succinct mathematical...

*An incredibly amazing ebook with perfect and lucid answers. It is written in basic terms and never difficult to understand. It has been written in an exceptionally basic way and it is only right after I finished reading this ebook in which it in fact modified me, affected the way I really believe.*
